## **Amendments To The Specification:**

Please replace the section of the Specification, beginning with the 1<sup>st</sup> line on page 4 to the 4<sup>th</sup> line on page 4 of the Specification, with the following section:

and has a thickness of 0.1 < d < 1.0 mm and is designed in such a way as to produce an air flow resistance of  $500 \, \mathrm{Nsm}^{-3}$ , < R1 <  $2500 \, \mathrm{sm}^{-3}$ , especially of  $900 \, \mathrm{Nms} \, 900 \, \mathrm{Nsm}^{-3}$  < R1 <  $1900 \, \mathrm{Nsm}^{-3}$ 

Please replace the section of the Specification, beginning with the 1<sup>st</sup> line on page 6 to the 7<sup>th</sup> line on page 6 of the Specification, with the following section:

Figure 1 shows a diagram of the construction of a lining according to the invention. This lining has a central support layer 3, which consists of an air-permeable material, preferably an open cell PU foam. In a preferred embodiment, this foam layer 3 has a thickness of approximately 5 mm to 30 mm, especially 20 mm, and has a  $\frac{1}{1000} = \frac{1}{1000} = \frac$ 

Please replace the section of the Specification, beginning with the 25<sup>sth</sup> line on page 7 to the 27<sup>th</sup> line on page 7 of the Specification, with the following section:

Preferred embodiment, a barrier layer of polyester and Cellulose fibres with a weight per unit area of 20 g/m³- $\underline{m}^2$  to
